

Corallo

Fernando and Humberto Campana

General description:

The generous self-supporting seat is hand made in an irregular weave of stainless steel wire, bent and soldered with thousand of weldings. The wire is then smoothed to eliminate any jutting edges, and made silky to the touch. The process takes about a week. The epoxy paint finish is available in coral, white and black. Suitable for outdoor use.

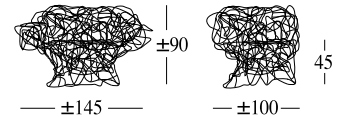

Technical description:

Frame in hand-curved stainless steel wire.
Epoxy paint in orange, black and white.
Suitable for outdoor use.
