

Capriccio

Jacopo Foggini

General description:

Inspired by the dynamics of a musical movement, it has a unique and irregular shape. Crystal and metal tube are the natural selection for the most suitable materials to create this unique table. The structure is formed by the interlocking of two systems of metal tubing curved only by manual instruments that support the glass tabletop.

The two systems of twisted metal give rise to a unique conformation with a free form spiral that passes beyond the top and arises above it. The top lets you see the structure, the protagonist of this unique composition.

Technical description:

Tabletop in transparent tempered glass, 15 mm thick.

Base in stainless steel tubing, molded, brushed and polished entirely by hand.
