

Campana

Fernando and Humberto Campana

General description:

Hanging lamp composed by assembling hundreds of irregular aluminium laser-cut shapes manually placed with great artistic care. Each Campana – bell is different from the other. The light is emitted mostly directly down, while the fissures of the shapes filter the light from the sides, creating interesting lighting effects.

Technical description:

Bell-shaped lamp available in two dimensions.

Sheets of polished anodized aluminium with gold or silver finish, laser-cut and riveted by hand.

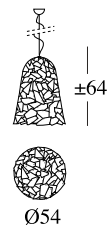

Lighting with 3 bulbs for the large model and one bulb for the small model: E27 / E26 sockets.

On request, product can be realised also according to other regulations.
